

POTATO STARCH

Potato Starch is a premium food – grade and industrial – grade starch product extracted from high – quality potatoes, boasting outstanding functional properties and a wide range of applications, suitable for food processing, pharmaceuticals, cosmetics, and other industries. The following is a detailed introduction:

Core Product Overview

Items	Details
Product Name	Potato Starch
Raw Material	High – starch potatoes from pollution – free planting bases, with strict control over pesticide and heavy metal residues
Extraction Process	Adopting advanced physical separation technology, including crushing, washing, centrifugal separation, and low – temperature drying, to ensure the purity and natural properties of starch, with protein content less than 0.1% and fat content close to 0%
Appearance	Fine, white powder with a smooth texture, no impurities, and good fluidity
Key Indexes	Amylopectin content 75–79%, amylose content about 22%; Gelatinization temperature 60–65°C; High viscosity, with a paste viscosity peak much higher than that of corn starch; High transparency, with a paste light transmittance of over 95%

Unique Functional Properties

- **Thickening and Stabilizing Performance:** Strong water-binding capacity (398–598 times its weight), quick thickening at low temperatures, stable paste that resists thinning when heated, and good freeze-thaw stability to prevent water separation.
- **Neutral Taste and Compatibility:** No grainy odor, preserves original flavors, suitable for both sweet and savory foods, and compatible with various ingredients and additives.
- **Low Allergy Risk and Safety:** Low protein content minimizes allergy risks, suitable for special dietary needs (e.g., kidney disease, gluten intolerance).
- **Natural Phosphate Groups:** Contains 800 ppm of bound phosphate, enhancing stability, water retention, freshness, and extending product shelf life.

Quality Control Certification

Food Industry

Gluten – free food: Key in flour blends, compensating for gluten and improving processing.

Confectionery: To make the products have a Q – elastic taste and good transparency.

Meat products: Improve the tenderness and yield of products.

Sauces and soups: It is used as a thickener.

Baked goods: To slow down aging, improve texture, and make the products softer.

Non Food Industry

Paper/Textiles: Serves as a sizing agent and thickener to enhance strength and smoothness.

Biodegradable Materials: Contributes to bioplastics and eco-friendly materials, supporting a low-carbon economy.

Cosmetics: In skin care products (masks, lotions)- moisture-locking, thickening, and texture improvement.

Pharmaceuticals: Acts as an excipient in tablets and capsules for bonding, disintegrating, and stabilizing.

Storage conditions: Store in a cool, dry, and well – ventilated place, avoid moisture and direct sunlight, and the shelf life is 24 months under proper storage conditions.

Customized Services

We can provide customized potato starch products according to the specific needs of customers, such as modified potato starch with different viscosities and functions, to meet the personalized needs of different industries and products.
